

Got an Eye for Detail and a Head for Solar?

ASK Renewables Is Looking for a Self-Employed Surveyor and System Designer to Join Our Team

We're not looking for salespeople. We're looking for **problem-solvers** — the kind who see a roof and start picturing possibilities, not just tiles and gutters.

If you've ever found yourself explaining to a mate the difference between a kilowatt and a kilowatt-hour — and secretly enjoyed it — you're already speaking our language.

ASK Renewables Ltd is growing, and we're on the lookout for a **self-employed Surveyor and System Designer** to join our close-knit Yorkshire team.

We don't mean "another cog in the machine." We mean someone who wants to help power a real change — for homes, for customers, and for the planet.

Because here at ASK, we're not just fitting panels. We're helping Yorkshire households take control of their energy, their bills, and their future. And we're doing it properly.

Solar Is Booming — But Only the Right People Can Keep Up

Let's be honest — solar's having a bit of a moment.

Every week, another Yorkshire homeowner realises they've had enough of playing "*guess the next price cap*" with their energy supplier.

But here's the thing: with more people turning to solar, it's not just about sticking panels on a roof and calling it a day. It's about understanding how every system fits — both physically and financially — into someone's life.

That's where you come in.

We're looking for someone who can step onto a driveway, shake hands with a customer, and immediately start thinking about solutions. Someone who can listen, calculate, design, and deliver — with a bit of personality thrown in.

And because this is a **self-employed position**, you'll have the flexibility to manage your own diary, balance your workload, and take real ownership of your success. You'll be part of the ASK team — but you'll be running your own show too.

If you've ever seen a site plan and thought, *"that inverter would be happier in the utility room,"* or taken pride in getting the design spot-on down to the last cable run, you'll fit right in here.

Because Getting It Wrong Costs More Than Just Money

At ASK, we've built our reputation on one simple thing — doing things right.

We don't sell systems. We **design** them.

We don't chase numbers. We chase **results**.

That means your role as a Surveyor and System Designer isn't a box-ticking exercise — it's the backbone of what makes us Yorkshire's most trusted renewable energy team.

One missed detail on a survey can throw an entire installation off course. A misplaced panel here, a wrong cable run there — and suddenly, what could've been a five-star job turns into a costly do-over.

That's why we need someone who takes pride in precision. Someone who double-checks, then checks again.

Because our customers deserve nothing less than flawless. And as a self-employed professional, you'll share that same pride — because every system you design is a direct reflection of your expertise.

Solve: The ASK Way — Honest, Professional, and Properly Local

You'll be the first point of contact for new enquiries — the friendly, knowledgeable face that helps customers take their first step into renewable energy.

You'll visit homes across Yorkshire — from the terraces of Doncaster to the hills above Halifax — getting to know each property, each family, and their energy needs.

You'll gather the details that matter:

- Roof pitch and direction
- Consumption patterns
- Shading and structure
- Electrical layout

And then you'll turn all that into tailored solar PV system designs that just *work*.

It's not about selling. It's about solving.

You'll use tools like **PClip**, **PV Sol**, and our in-house design systems to create bespoke proposals — the kind that make customers go, *"Ah, now that makes sense."*

You'll follow up, tweak designs, answer questions, and explain everything in plain English (because jargon's for people who don't actually know what they're talking about).

Once the system's installed, you'll be there to ensure everything's running as it should — showing customers how to get the most out of their setup, configure their battery storage, or align their system with their tariff.

In short? You'll be part designer, part educator, and part Yorkshire ambassador for clean energy — **with the independence and freedom that comes with being self-employed.**

What You'll Be Doing (When You're Not Explaining What a kWh Is)

You'll:

- Be the first point of contact for new enquiries into the business
- Conduct on-site surveys to understand each client's energy needs and property layout
- Create solar PV system designs and quotations bespoke to residential clients
- Use or learn PClip, PV Sol, and related design software (we'll train the right person)
- Follow up on proposals, revising them based on customer feedback

- Support customers post-installation, ensuring their system's configured properly
- Work closely with our installation and customer service teams — because around here, everyone's in it together
- Feed back insights about market trends and customer needs so we can keep leading, not following

This is a **self-employed role**, so you'll manage your own time, projects, and income. You'll have the backing of ASK's trusted brand, but the flexibility to structure your work in a way that suits you best.

The Skills and Experience We'd Love to See

You don't need to be a solar guru (though if you are, we won't complain). But you'll need the right mix of technical understanding and common sense — both of which go a long way in this industry.

Here's what will help you thrive:

- A solid grasp of electricity consumption and behaviour in homes
- Working knowledge of basic electrical terms (kW, kWh, load profiles, etc.)
- Understanding how to design viable solar PV systems — where panels, inverters, and batteries belong
- Confidence to explain your proposals clearly and simply — no buzzwords, no fluff
- Ability to manage your own diary and stay organised
- Competency with Office software and digital tools
- A full UK driving licence

Experience with design software like **PV Sol** or **PClip** is a bonus, but not a dealbreaker — we'll train you up if you've got the right attitude and aptitude.

The Person Behind the Profession

We're not after just any Surveyor and System Designer.
We're after an **ASK** one.

That means someone who:

- Puts customers first, every single time
- Has a personable, confident, and easygoing approach — no hard sales, no waffle
- Delivers that unmistakable ASK experience — simple, transparent, and trustworthy
- Has an eye for detail (because one missed measurement can ruin an installation)
- Is **self-motivated**, reliable, and proud of their work
- Is comfortable working **self-employed**, managing their own schedule and workload
- Is genuinely passionate about renewable technology and sustainability

If you get a buzz from helping customers save money and do their bit for the planet, you'll feel right at home here — while still enjoying the freedom of working for yourself.

Who You'll Be Joining

ASK Renewables Ltd isn't a faceless national chain.

We're a **family-run, Yorkshire-born business** with over a decade of experience and a wall full of five-star reviews — **188 and counting on Which? Trusted Traders**.

We've built our name on being straight-talking, reliable, and professional — the kind of company people actually enjoy dealing with.

No call centres. No commission-chasing. Just honest, high-quality work, done right.

And it's paid off — we're now one of Yorkshire's most trusted renewable energy providers, fitting solar systems from Leeds to Doncaster, Wakefield to York, and everywhere in between.

When you partner with ASK as a **self-employed Surveyor and System Designer**, you're not just joining a company — you're joining a reputation.

Why Work With ASK (and for Yourself)

Because this isn't just another job.

It's a **career move** that gives you both **independence and impact**.

As a self-employed Surveyor and Designer working alongside ASK Renewables, you'll enjoy:

- The freedom to manage your own schedule
- The support of a trusted Yorkshire renewables brand
- Ongoing training and development from experienced pros
- Access to high-quality leads and a respected reputation
- A friendly, supportive network that treats you like part of the team
- The satisfaction of helping customers take control of their energy bills and reduce their carbon footprint

And yes — the occasional brew and biscuit on site. We are Yorkshire, after all.

Sound Like You?

If you've got an eye for design, a head for detail, and a heart for helping people — we want to hear from you.

This is a self-employed position, giving you the flexibility to work independently while collaborating closely with one of Yorkshire's most respected renewable energy companies.

Get in touch with the ASK Renewables team today or send your CV to [insert email/contact here].

Don't hang about — opportunities like this don't stick around long.

Because when you work with ASK Renewables, you're not just joining a company.
You're helping to power Yorkshire's future — one rooftop at a time.
