

Surveyor & System Designer – Yorkshire

You know what good solar looks like.

Not just the shiny panels or the clever software — but the smile on a customer's face when they realise their roof's now doing the hard work.

That's the ASK Renewables story. We help Yorkshire homes take control of their energy, their bills, and their future. And right now, we're looking for a **Surveyor and System Designer** to help even more people make the switch.

If you've got an eye for detail, a knack for problem-solving, and you can explain kilowatts without putting someone to sleep, keep reading.

What makes this role different?

You're not selling — you're solving.

You'll be the first person our customers meet. The one who listens, measures, and designs a system that genuinely fits their home — not a sales target.

A local company with proper Yorkshire roots.

We're family-run, trusted by hundreds of households, and proudly based right here in Yorkshire. No London call centres, no pushy nonsense.

You'll shape the future of solar, one roof at a time.

Every visit, every design, every call you make helps another family take control of their energy bills. That's real impact, right there.

Training and support from people who actually know their stuff.

Used Pylon or PV Sol before? Great. Haven't? No problem — we'll show you the ropes.

Every day's different.

One morning you're surveying a detached in Doncaster, by afternoon you're sketching a bespoke system for a bungalow in Barnsley. No two roofs — or days — are the same.

The kind of person who'll thrive here

- You can spot a good solar setup a mile off (and explain why).

- You're confident talking to people — friendly, reassuring, never pushy.
 - You've got an eye for detail — because one missed measurement can ruin an installation.
 - You understand how homes use energy — when, where, and how to make it work smarter.
 - You can manage your own diary without someone chasing you every five minutes.
 - You actually like the idea of renewable energy changing lives — not just the tech, but what it means for people.
 - And yes, you've got a **full UK driving licence** (we can't have you trying to survey half of Yorkshire on foot).
-

A typical day could see you...

- Visiting a customer's home to assess their roof, energy use, and goals.
 - Designing a solar PV system that fits like a glove — not one-size-fits-all but you already knew that if you've got this far.
 - Putting together clear, accurate proposals and quotes (no jargon, no waffle).
 - Following up with customers to make sure they understand their system and love it as much as we do.
 - Feeding back new ideas and market insights to help ASK stay ahead of the curve.
 - Working hand-in-hand with our installation and customer care teams to deliver that trademark "ASK experience."
-

Why you'll love working with ASK Renewables

Because we're a bit different.

We're not a national outfit chasing sales. We're a **family-run, Yorkshire-grown company** with 185 five-star reviews and a proper reputation for doing things right.

We don't pressure people into buying solar — we educate, we explain, and we let them decide. It's why customers trust us (and why we sleep well at night).

You'll be joining a team that's:

- Friendly, supportive, and not afraid of a bit of banter.
 - Proud of what we do — because it actually helps people.
 - Always up for a brew and a proper chat.
-

You'll need

- A solid understanding of electricity use (kW, kWh — all that good stuff).
- The ability to design practical solar PV systems that make sense in the real world.
- Confidence using design and office software (we'll train you on the rest).
- Attention to detail, a calm head, and a self-motivated attitude.

If you've got experience in renewables, construction, or electrical design — brilliant.
If you're just ready to learn and passionate about clean energy — even better.

Fancy joining Yorkshire's most trusted solar team?

If you're ready to swap "just another job" for one that actually makes a difference, we'd love to hear from you.

 **Send your CV to admin@ask-renewables.co.uk with a short cover letter of why you'd be perfect for this role.**

Because when you join ASK, you're not just fitting panels — you're helping power Yorkshire's future, one happy home at a time.
